## **REMARKS**

Claims 1-20 were pending in this application.

Claims 1-20 have been rejected.

Claims 1, 8, and 15 have been amended as shown above.

Claims 1-20 remain pending in this application.

Reconsideration and full allowance of Claims 1-20 are respectfully requested.

## I. REJECTION UNDER 35 U.S.C. § 102

The Office Action rejects Claims 1, 2, 15, and 16 under 35 U.S.C. § 102(b) as being anticipated by U.S. Patent No. 5,625,325 to Rotzoll et al. ("Rotzoll"). This rejection is respectfully traversed.

A prior art reference anticipates the claimed invention under 35 U.S.C. § 102 only if every element of a claimed invention is identically shown in that single reference, arranged as they are in the claims. MPEP § 2131; *In re Bond*, 910 F.2d 831, 832, 15 U.S.P.Q.2d 1566, 1567 (Fed. Cir. 1990). Anticipation is only shown where each and every limitation of the claimed invention is found in a single prior art reference. MPEP § 2131; *In re Donohue*, 766 F.2d 531, 534, 226 U.S.P.Q. 619, 621 (Fed. Cir. 1985).

Rotzoll recites a system and method for phase lock loop ("PLL") gain stabilization. (Abstract). The system allows the gain variation of a voltage controlled oscillator ("VCO") to be controlled. (Abstract). The VCO includes an LC circuit (element 74) that has various switches (elements 711-713) and capacitors (elements 701-703). (Figure 7; Col. 4, Lines 33-34). A

U.S. SERIAL NO.: 10/071,347

PATENT

digital control signal (element 731) is used to control the gain of a phase detector and the gain of

the VCO by controlling the switches. (Col. 4, Lines 45-56). The digital control signal represents

a selected frequency band for the VCO. (Col. 4, Lines 43-44).

Rotzoll simply recites that capacitors in an LC circuit of a VCO are adjusted to alter the

gain of the VCO. Rotzoll also recites that the capacitors are adjusted based on a digital control

signal. Rotzoll lacks any mention that the digital control signal is based on a difference between

a "resonant frequency" of the LC circuit and a "reference frequency." Instead, Rotzoll clearly

recites that the digital control signal is based on the desired frequency band of the VCO. In

addition, Rotzoll fails to mention that the capacitors are adjusted to make a "resonant frequency"

of the LC circuit more like a "reference frequency."

Because of this, Rotzoll fails to anticipate controlling the switching of one or more

integrated circuit capacitors "in response to [a] difference between" a "resonant frequency" of an

"inductive-capacitive resonant circuit" and a "reference frequency" so as to "alter the resonant

frequency towards the reference frequency" as recited in Claim 1. Rotzoll also fails to anticipate

"selectively switching one or more integrated circuit capacitors" in response to a "difference"

between a "resonant frequency" of an "inductive-capacitive resonant circuit" and a "reference

frequency" so as to "alter the resonant frequency towards the reference frequency" as recited in

Claim 15.

For these reasons, the Office Action has not established that Rotzoll anticipates all

elements of Claims 1 and 15 (and their dependent claims). Accordingly, the Applicant

respectfully requests withdrawal of the § 102 rejection and full allowance of Claims 1, 2, 15, and

PATENT

16.

II. REJECTION UNDER 35 U.S.C. § 103

The Office Action rejects Claims 3-6, 8-13, and 17-20 under 35 U.S.C. § 103(a) as being

unpatentable over Rotzoll in view of U.S. Patent No. 6,738,601 to Rofougaran et al.

("Rofougaran"). The Office Action rejects Claims 7 and 14 under 35 U.S.C. § 103(a) as being

unpatentable over Rotzoll and Rofougaran in further view of U.S. Patent No. 6,013,958 to Aytur

("Aytur"). These rejections are respectfully traversed.

In ex parte examination of patent applications, the Patent Office bears the burden of

establishing a prima facie case of obviousness. (MPEP § 2142; In re Fritch, 972 F.2d 1260,

1262, 23 U.S.P.Q.2d 1780, 1783 (Fed. Cir. 1992)). The initial burden of establishing a prima

facie basis to deny patentability to a claimed invention is always upon the Patent Office. (MPEP

§ 2142; In re Oetiker, 977 F.2d 1443, 1445, 24 U.S.P.O.2d 1443, 1444 (Fed. Cir. 1992); In re

Piasecki, 745 F.2d 1468, 1472, 223 U.S.P.O. 785, 788 (Fed. Cir. 1984)). Only when a prima

facie case of obviousness is established does the burden shift to the applicant to produce

evidence of nonobviousness. (MPEP § 2142; In re Oetiker, 977 F.2d 1443, 1445, 24 U.S.P.Q.2d

1443, 1444 (Fed. Cir. 1992); In re Rijckaert, 9 F.3d 1531, 1532, 28 U.S.P.Q.2d 1955, 1956

(Fed. Cir. 1993)). If the Patent Office does not produce a prima facie case of unpatentability,

then without more the applicant is entitled to grant of a patent. (In re Oetiker, 977 F.2d 1443,

1445, 24 U.S.P.Q.2d 1443, 1444 (Fed. Cir. 1992); In re Grabiak, 769 F.2d 729, 733, 226

U.S.P.O. 870, 873 (Fed. Cir. 1985)).

-13-

A prima facie case of obviousness is established when the teachings of the prior art itself

suggest the claimed subject matter to a person of ordinary skill in the art. (In re Bell, 991 F.2d

781, 783, 26 U.S.P.Q.2d 1529, 1531 (Fed. Cir. 1993)). To establish a prima facie case of

obviousness, three basic criteria must be met. First, there must be some suggestion or

motivation, either in the references themselves or in the knowledge generally available to one of

ordinary skill in the art, to modify the reference or to combine reference teachings. Second,

there must be a reasonable expectation of success. Finally, the prior art reference (or references

when combined) must teach or suggest all the claim limitations. The teaching or suggestion to

make the claimed invention and the reasonable expectation of success must both be found in the

prior art, and not based on applicant's disclosure. (MPEP § 2142).

As described above in Section I, Rotzoll fails to disclose, teach, or suggest various

elements recited in Claims 1 and 15. Rotzoll also fails to disclose, teach, or suggest analogous

elements recited in Claim 8. The Office Action does not rely on Rofougaran as disclosing,

teaching, or suggesting these elements of Claims 1, 8, and 15. As a result, the Office Action has

not established that the proposed Rotzoll-Rofougaran combination discloses, teaches, or suggests

all elements of Claim 8.

Claims 3-7, 9-14, and 17-20 depend from Claims 1, 8, and 15, respectively. The Office

Action has not established that the proposed Rotzoll-Rofougaran combination discloses, teaches,

or suggests all elements of Claims 1, 8, and 15. Because of this, the Office Action also has not

established that the proposed Rotzoll-Rofougaran combination discloses, teaches, or suggests all

elements of Claims 3-7, 9-14, and 17-20.

**DOCKET NO.: P04988 (NATI15-04988)** 

U.S. SERIAL NO.: 10/071,347

PATENT

For these reasons, the Office Action has not established a prima facie case of obviousness

against Claims 3-7, 9-14, and 17-20. Accordingly, the Applicant respectfully requests

withdrawal of the § 103 rejection and full allowance of Claims 3-7, 9-14, and 17-20.

III. <u>CONCLUSION</u>

For the foregoing reasons, the Applicant respectfully requests full allowance of all

pending claims and that this application be passed to issuance.
